Animal Genetics:

Cattle: inheritance of the guinea trait in descendants of Florida native cattle, 32; ocular squamous carcinoma, 51; harelip in shorthorn, 99; blood types of the progeny of a pair of cattle twins showing erythrocyte mosaicism, 136; multiple lipomatosis, 231; Thailand short-tailed, 256; influence of the dwarf gene on insulin sensitivity, 278.

Fowl: genetic parameters of gland and body weights in White Rock cockerels, 59; turkey-chicken hybrids, 69; interaction product of cellular antigens in species hybrids between *Gallus gallus* and *Phasianus colchicus*, 122; vibrator, a recessive sex-linked mutation in turkeys, 158; splitfoot, a lethal mutation affecting foot structure, 161; studies with talpid², an embryonic lethal, 195; alternative explanation for sex reversal and abnormal sex ratios, 208.

Frog, interaction of mutant genes, 151.

Hamster, light undercolor in Syrian, 111.

Horse, genetics of "brown," 127.

Mice: "dorsal excrescences," 21; further mutation of the mottled type, 116; new mutation of *a* to *a'*, 121; studies on the hemoglobin locus, 141; "open eyelids" in newborn, 188; mahogany, a recessive color mutation in linkage group V, 228; rib fusions, a new mutation, 264.

Ponies, fashion in the color of Shetland ponies and its genetic basis, 247.

Rabbits, insemination pH and sex ratio, 156.

Schistosomes, pachytene chromosomes in three species, 3.

Sheep, "silky," a dominant mutation, 39.

Swine: "hydrodorsal" and other fetal malformations, 77; relation between sex and survival, 284.

Tribolium castaneum, black mutation, 131.
